

Rhodimet®

Rhodimet® is a source of methionine, an amino acid that is essential for all animals. Amino acids are the structural elements of all plant and animal proteins.

Animals are unable to synthesize some of these amino acids, called essential amino acids, on their own. They have to be supplied in their food. As the methionine content in raw plant materials is insufficient, synthetic methionine complements must be added to their feed. Adisseo proposes two formulations under the Rhodimet® brand: Rhodimet® AT 88, a concentrated liquid source of methionine that is particularly well suited to modern, automated feed factories, and Rhodimet® NP 99, in powder form for use in premixes or in non-automated feed factories. Rhodimet® is positioned as the market reference.
